

How to Run Integration Test

Test Prerequisites

- Make sure you have **Docker** installed.
- Pull the **latest code** from the repository.

Run the Tests

From the backend root directory, run:

```
./gradlew clean test
```

Check Test Details

- **Test Report:**
Open the following file in your browser:
`peakform/build/reports/tests/test/index.html`
- **Test Coverage:**
Open the following file in your browser:
`peakform/build/reports/jacoco/test/html/index.html`

Good Practice

- Always run tests **after making changes** and **before committing** your code.

APIs with Automated Tests

GymController

- **Get all gyms:**
`GET http://<ip>:<port>/gyms`
- **Get a specific gym:**
`GET http://<ip>:<port>/gyms/{gymId}?userUuid={userUuid}`
